Dear Ms. Hennay,
I ask that:

1) No new genetically-engineered foods or products with GE ingredients be released until the Food & Drug Administration requires long-term safety testing of all GE foods before they go to market.

2) All GE foods presently on the market be labelled giving consumers the right to know what's in the food they're eating.

GE foods are definitely harmful to the environment because the production of these crops destroys biodiversity and no one knows what cross-pollination will do; and they may be harmful to our health.

Thank you,
Eleanor MacLellan
