Rabies is on the Prowl...

- **For those with high-risk jobs**[1]—Including veterinarians, animal control officers, wildlife handlers, anyone who works in animal-related industries (eg, animal research laboratories)
- **For travelers to high-risk areas**[1]—Canine rabies is widespread in Asia, Africa, India, and parts of Latin America, including Mexico
- **For those exposed to potentially rabid animals**[1]—including raccoons, skunks, foxes, coyotes, bats, and unvaccinated dogs and cats

If left untreated, rabies is almost always fatal[1]—
