Two years ago I suffered a vertebrae compression fracture of the spine — and was diagnosed with osteoporosis and curvature of the spine. I am 70 years of age and have since suffered with constant discomfort.

I have been taking oxycontin (40mg) under the

supervision of Dr. Justin Wasserman. for about 15 months.

This drug has been very effective for me.

It is unfortunate that some people abuse the drug.

I am very grateful for this medication — hope it continues to be available for people, as myself, who depend on relief.

Sincerely

Margaret Petley
