FDA Commissioner Henney

Please stop livestock producers from routinely adding medically important antibiotics to animal feed (to promote growth). Let humans use them to compact bacteria — instead of allowing bacteria to become antibiotic resistant.

Please also prohibit poultry farmers from using fluoroquinolones. Doctors need tools to do their jobs, ~~our~~ keep humans healthy and to save ~~life~~ lives! There is already no other drug to treat Salmonella infections.

These industries may be more organized and better financed than individuals but that does not make their position — threatening our health — the correct one.

Sincerely,

(R.J. Herbison)
