Commissioner Henney:

I am writing this letter to strongly urge that mandatory safety testing & labeling be implemented for all GE foods. It is amazing that the FDA does not require mandatory safety testing for genetically engineered foods despite reports from FDA researchers that these plants may increase toxins, create new toxins or alter nutrient levels in foods. There are 46 different GE foods on the market for purchase that haven't had pre-market safety testing & labeling in this country. These products are in a variety of food items from baby formula to corn chips. People with food allergies or religious or dietary concerns can experience a lot of problems. Also, plant foods are being inserted with animal genes.

I implore you to do the right thing by implementing these aspects on GE foods to ensure more safety for the general public. We already have enough to worry about with what we eat.

Thank you,
Chris Drumright
