Dear FDA,

I hope I am not too late in writing you about the petition filed to ban the use of bovine Growth Hormone on dairy cows. I feel very strongly that this should not be used & is a major factor in the amount of cancers & other sicknesses today. Years ago prior to the use of BGH & other things - breast cancer, tumors & many others were around but not as prevalent as today. I myself have been treated for breast cancer at age 40 - also 2-3 of my friends. I attribute a lot of this to environmental issues beyond our control. Things added to the foods we eat & drink. I know this is not the main factor but strongly feel it contributes its share. My self now I only buy Horizon organic milk & you can taste the difference. Please act on Docket #99P-4613

99P-4613

C208

Ban the use of bovine Growth Hormone used on dairy cattle. The sad thing is the most of the general public is not aware of how this hormone affects the cows used on. It is totally inhumane & not needed. Thank you for your support. I hope you vote in favor to ban BGH. It would definitely be a step in the right direction!

Sincerely,

Delma Lindsey
