Dear Commissioner Kenney,

I like it when my mom buys rBGH ~~free~~ milk instead of milk w/ rBGH in it.* I do not believe it is right that you are injecting chemicals into a cow just to make more milk. The drug is very unhealthy, and it can cause a lot of problems, which are very serious, in cows. It isn't necessary at all. U.S. dairy farmers already produce enough milk; more than the public consumes. You, the FDA, approved DES and said it was safe. Later, it had effects on female offspring, such as my mom. I don't trust you're approving of rBGH, as a result of that. Please reconsider what you've said. Thank you!

Kyle de Par[redacted]

* My mom only buys rBGH free milk, anyway.
