Food and Drug Administration JUL 20 P1:47

Dear Sirs,

This is a plea for you to stop consideration of making Prescription drugs available over the counter.

This would be a very dangerous step, especially if birth control pills were made available (even 13-14 yr olds) to anyone who had the money to purchase them without obtaining a medical History or Physical exam.

I have heard of other drugs being considered that I feel would also be dangerous without Lab tests, or a Physician follow up.

Do not let this happen! It could be a disaster for many people.

Sincerely,

Virginia Curry
