Dear Commissioner Henney:

Due to first-hand experience, for years, I have been aware antibiotics are becoming less effective in treating diseases in humans.

This may be due to antibiotics being added to animal feed to promote faster than "normal" growth.

Please DO EVERYTHING in your power to DISALLOW THIS PRACTICE of "fast finishing" animals AT THE EXPENSE of us humans or we will die because our illnesses cannot be treated medically.

Thank you,

Mrs. Barbara Croll
1318 1st Ave - #12
Menominee, Mi
49858

P.S. This is a terrible legacy to leave your grandchildren -- that antibiotics cannot treat their diseases.
