Jane E. Henney
FDA Commissioner
Rockville, MD

Dear Ms. Henney,

I am beginning to wonder what is safe to eat anymore!
We have been told that chicken is lower in fat content but it seems more and more people are getting sick from Salmonella food poisoning. It appears drugs used to treat poultry flocks are causing a strain of bacteria that is resistant to drugs that are supposed to treat food poisoning.
Our country need not worry about being destroyed by foreign nations; we're being attacked from within by our government agencies. Please don't sell out to the big drug companies.

Sincerely
Mrs. Mary L. Lein
