Dear Commissioner Henney, 11/8/99

2337 '00 JAN -6 A10:47

Here is another very serious problem in this country that I feel is being ignored:

Antibiotics have been routinely fed to poultry (to speed growth) for over a decade.

That might explain why bacteria are now becoming resistant to antibiotics

We need legislation to prohibit livestock producers from routinely adding medically important antibiotics to animal feed to promote growth.

Something needs to be done <u>now</u> before <u>all</u> antibiotics become completely useless.

Thank You,
A discouraged American
