Please work to prohibit livestock producers from routinely adding medically important antibotics to animal feed - "to promote growth". This is very likely the reason why bacteria are becoming resistant to our strongest of Antibotics, and this is very frightening -!

Please do what you can to keep this from continually happening - and put a stop to this!

Our Nation could be hit with an epedmic that can not be controlled - because we are immune to the strongest of our Antibotics! Thank you.

Respectfully: Virginia B. Pratt Black
