Dear Dr. Freidman,

I am writing this letter to you as a very concerned mother and consumer.

I am asking that the FDA immediately suspend Monsanto's license to sell rBGH.
First of all - it is not necessary to be used at all. The only reason is that Monsanto is a great big bully.

Between their genetically altering milk and it's products, and their wrecking havoc with vegetable and plant seeds - we are heading for a major disaster.

Life is a precious gift - for plants, animals and humans. We need to find a balance and accept our place
Our children and all deserve to be able to eat and drink healthy real food

Please realize that we dont want food that has been genetically altered sprayed with tons of posionous pesticides, irridated and mutated.

Let's get real - Back to the Basics
Our lives depend on it.

Sincerly,
Claudia Wilson
