Health Canada has found that the FDA has not done a good job of studying the effects of rBGH on the children who drink it in milk. I hope you plan to do a re-study or a review of your previous study. rBGH should not be in our milk until it is proven innocent. If our kids are hurt, the whole economy will suffer to pay for their health care - remind the politicians of that, please. May God help you keep us safe.
