Dear Dr. Friedman:

Please suspend Monsanto's license to sell rBGH and do much more intensive testing on products that so basically alter the fabric of our lives. Ever since I (and my extended family) learned about the OK of rBGH we have curtailed our consumption of milk by 90% or more, and from the reports I have read lately, it was certainly a wise decision. We insist that the FDA require genetically-engineered products to be so labeled. We used to believe FDA existed to protect US Citizens. Please do the right thing! Thank you,

Sally Blaisdell, 149 Vineyard NW Albuquerque, 87107
