Dear Mr. Shadley

I want to register my opposition to repealing the labeling requirement on irradiated foods I which I have read that food producers want. I also oppose genetically modified foods as I don't think enough long-time testing has been done. Several informational programs on NPR have interviewed scientists who feel industry is moving too fast for profit rather than concern on how people will be affected. No one now can predict long-term effect on next generation. I hope you & the Govt will continue to be concerned about citizens' rights. Thank you
