Dear Honorable Donna Shalala

Re: irradiation of foods. There are those of us who do not want to be guinea pigs to see if over the long term or even short term irradiated foods harm our health. There are a multitude of factors affecting our health. Some of them we know about such as FDA approved pesticides. Others we don't.

All I'm asking is that irradiated foods be clearly labeled!

I'm aware we have produced excess radioactive byproducts with 1/2 lives involving centuries. But the answer is not to dump this stuff on our food.

Thanks for giving this point of view, (which is not mine alone) your serious consideration.
