JAN 15, 98

Dear Sirs,

J607 '98 JAN 21 A9:32

Attn. Docket No 97N-0117

I would like to express my concern on new drug registration and use for minor species. I have a new catfish operation and have found out that the aquaculture industury is in great need of more and easier purchasing of drugs and Algiesides. To my knowledge there are only 2 drugs approved for catfish being terramicen and Romet. Also there are only about 3 algiesides being coppersulfate, and pottassiampermagnate and Aquashade - If you would concider this it would be very helpfull - thank you for taking the time!
