Dear Dr. Henrey,

I strongly urge you to eliminate the use of antibiotics in agriculture, or at least follow the lead of the European Union and ban those commonly used in human medicine. You already know of the growing problem of resistance to such antibiotics. Antibiotics should not be added directly to animal feed - they should be used on a case by case basis. Perhaps livestock would respond to some of the alternative substances with antibiotic effects like oregano oil, curcumin, oregon grape, etc.
