Rachel Behrman
Deputy Director of the FDA Office of Medical Policy
Docket Mananagement

I am glad something is going to be done so we can better understand the medication we are taking dosage, before or after meal wrt meal - the disadvantage and advantages the whats and the where. I don't have a Web site where could I get a complete copy of the Draft.

I could never understand you take a medication for something than the cure is worse than being sick it says if you get a magnifying glass it can give you flu - Daarahha bleeding or what ever small print all the crap they put in that folded up sheet if you get it 3/4 the time the Drugs throws it away and you never see it I would also like to see the Drug Companies name & address put on somewhere not just name & state like Eli Lilly NY NY 10033 You never know if they get it as they never answer your letters - a street address etc

C5

OON-0086

I think the Pharmacist should label the Bottle Better also leave the insert in the Box and also should not sample your medicine before you get it. I use inhaler and my Pharamacist alsway try it 2 or 3 time to see if it is Work and then he fail to put the Cap back on -

I have to remind them I want the Cap box and all when I get a Presumption.

I am whole Heartedly for this to make these inserts better to Understand and larger Print and that the Druggist Cant take them Out
