To whom It may Concern

Re: Docket #98P-0151/CP1

I wish to register my complaint for the animals who are too sick or injured into the human food chain.

There is some evidence that some of these animals have been linked to "Mad Cow Disease". I have seen some film on how these animals are moved. They are pushed with tractors, breaking their bones, and causing more misery for them. I understand that some 90% of downed animals can be prevented, with better care and handling.

Isn't there enough profit for these people who allow such goings on? Is there ever enough. When on earth is the U.S.D.A.? Don't we have enough diseases that we can't contain? There is no cure for "Mad Cow Disease". You only find out you have it, ~~is~~ when the autopsy is done. A little late, wouldn't you say? There is enough meat in the U.S., without using downed animals. Please put a stop to this.

Sincerely
Claire Case
