Dear Jane Henney,

5451 '00 NOV 20 A10:16

I am a student at the University of Washington who is studying biotechnology. My schedule is very full and when I have an opportunity to eat something I usually eat the first substantial meal I can get my hands on. I feel that I eat relatively nutritiously - for a student - but will this huge scare of "genetically-altered foods" I don't know if I do actually eat as nutritiously as I had presumed. Similarly in my Biotech classes I am becoming more and more aware of the lack of studies being done on these crops. It stimulates fear in me for my own well being as well as my friends and family members that they might be ingesting protiens or hormones that have no business being in their body.

For our citizens sake please do not let any more GE foods be released until the FDA requires long-term testing before they go on the market, as well as

00P-1211

C8807

labeling all GE foods currently on the market for the Consumers Safety.

Thank You so much for your time.
