Dear FDA

I am writing to express my concern over the FDA's regulation of GE foods to ask that the agency's current policies be changed, and to support all the points in docket #00P-1211/CP1, specifically:

- All GE foods should be labeled, so the public is informed and has a choice.
- GE foods should not be assumed to be "generally recognized as safe" and should have mandatory pre-market safety testing.
- There should be a moratorium on GE foods + crops until long term studies show they are safe for human health + development + environment.
