Dear FDA Commissioner,

Please consider strong government regulation regarding Genetically Engineered Foods.

Pre-Market safety testing and mandatory labeling would be the first step.

These issues are so important to us. We're

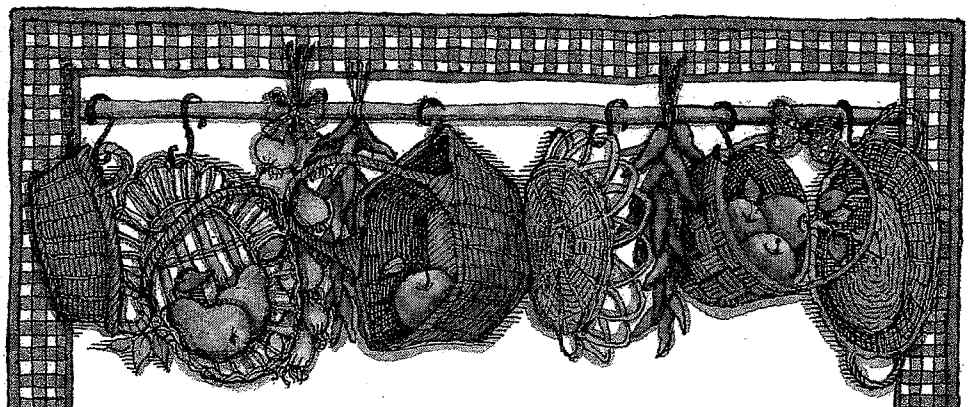
C4233

talking about our food. Who really knows the long term effects of these foods? At the very least we should be able to choose these foods or not. Mandatory labeling is needed so we can make informed decisions about our food.

Please let's approach this cautiously. One small step at a time. The foods we have been eating for thousands of years have evolved slowly as nature intended them to.

Lets not carelessly



alter our food in ways we can only imagine.

Lots + lots of testing need to be done. All GE foods should be taken off the shelves until we are 100% certain of their safety.

Please put a lot of thought into these very serious decisions.

Thank you for your time.

Sincerely,

Anne Morton
