Dear Commissioner Jane Henney;
Docket #00P-1211/CP1

9151 '01 FEB -1 A9:30

This letter is requesting your attention be given to GE (genetically engineered) foods labeling. People aren't confident in produce that includes pesticides in the altered seed to guarantee a crop. The tests are not conclusive as to their safety. And God saw everything that He had made. And behold, it was very good" (Gen 1:31) Its like spitting in the Creator's face and saying we should correct God's dumb mistakes. God also made insects and they serve a purpose in the matrix of life. There is now integrated pest management on small and organic farms and public building grounds.

00P-1211

C 10699

Big business shouldn't power push their ~~guaranteed~~ ends and ignore Mothers concerns and even European markets don't want our exported crops that aren't labeled.

"Labeling" provides a chance for the consumer who is uneasy about new technology without ~~deploying~~ radical scare tactics. Organic farmers have to go through very strict scrutiny to gain a license to label their product "Organic". They are a small agribusiness and have had strong insinuations that they aren't pesticide free etc. They've bowed to the concerns and accusations to ~~label~~ gain their labeling.

The same courtesy is requested

for "GE" foods. Some people are truly fearful when you put fish genes in tomatoes to bring about something else.

Your attention to this would be greatly appreciated.

Sincerely
Winnie Hinkerwitz
