FDA Docket #00P-1211/CP1
5630 Fishers Ln., Rm. 1061 (HFA-305)
Rockville, MD 20852

Dear Commissioner Henney,

Please take the courageous leadership called for in moving the FDA to a position of unwavering support of a legal petition by the Center for Food Safety.

We urge the FDA to require that:

Any proposed new genetically-engineered foods or products with GE ingredients be required long-term testing of all GE foods/products before they go to market. Had such a requirement been in place, testing would have disclosed the poisonous pollen of GE corn, now planted extensively and killing indescriminately.

All GE foods now on the market be labeled as such. (That should include dairy products containing the BGH). Consumers have a right to know!

I am 71, mother, grandmother, and one of the human supports for the Montsanto Con in Seattle Nov. 30, 99. It was a brutalizing, scary experience I hope I won't do again for lack of government protection of food we eat.

00P-1211

Sincerely,

Nancy Lou Tracy
