Dear Dr. Sundlof:

Please BAN antibiotics used to promote growth in factory-produced farm animals. European Union, Sweden etc have already banned all antibiotics in animal feed because of the danger to people of becoming infected with antibiotic resistant bacteria from meat, milk + eggs, for which there is no treatment!!

We find it incredible that our government cares more for the interests of factory hog farmers, battery cage hen producers, dairy farmers, than for the health of its citizens.

Sincerely,

Helen Strzalka
