Dr. Stephen Sundlof
FDA Center for Veterinary Medicine
7500 Standish Place
Rockville, MD, 20855

Dr. Sundlof:

I am extremely concerned about pollutants in my environment that are a danger to my immune system and thus my health.

I am writing to ask the FDA to ban antibiotics used to promote growth in farm animals. Drugging farm animals to simply promote their rapid growth is not necessary and is creating health problems for those of us eating meat and dairy products.

Please review your bovine growth hormone approval for dairy cows. It increases the chance of mastitis by Reservations ~~1-800-HILTONS~~ 25%, infertility in cattle by 18% and lameness by 50%.
