Dear Sirs,

I think it is really sad that in a country like ours that claims to promote freedoms that our government has decided to genetically alter our foods and not even tell us! It is bad enough that we are doing this meddling but we don't even know the consequences. Many things are probable. Young girls mature too early due to the hormones in milk, weed and insect strains are becoming immune to irradication by insecticides. Probably our bodies will be adversely affected in many ways. But it is unconscienable to do all this manipulation without our knowledge all for the profit motive!

By the way, the profit motive will probably not be served anyway. I am going to buy more + more organic
