Food & Drug Administration.

'99 MAY -7 P12:52

After reading about the Irradiation of food that is not labeled I couldn't believe that the public is uninformed about what they're doing to the food Americans eat & feed their children. We have a right to know what we are eating - how it has been processed, grown, altered etc.

The current labeling is not self explanatory and is very misleading. Electronic or "Cold" Pasteurization sounds good - when it is actually harming the food, its nutritional value and can be dangerous to consume.

The wording of the current radiation or irradiation disclosure should be revised to tell the exact truth in simple language and they should state when they expire
