When the irradiation of sewage sludge in city waterworks across the country did not achieve the goal of reducing the costs of nuclear plant waste disposal across the US in 1980's, the same players turned to the same process for irradiating our food. Same bad idea, only worse — irradiate before we eat it, not after. Cattle fed irradiated sewage sludge gas food in experiments at New Mexico State University did not thrive and produced mutated offspring in only short term experiments in the mid 1980's.

Stop killing us! Stop and defeat the work in Docket # 98N-1038.

Sincerely,
Rosamund Evans
