To whom it May Concern

MAY 21 A10:08

Food should never be irradiated. Since it is going on, first and foremost it should be repealed immediately. Until irradiation is completely stopped, labelling should be maintained in all cases in which irradiation is employed. Any and all food & feed containing ingredients should be clearly and boldly labelled and placed in obvious viewing areas so that people will see and know whether what they're about to purchase is or isn't an irradiated product.

Any phrase using the word pasteurization should be forbidden - this is a very misleading term - in effect a lie. IRRADIATED FOOD PRODUCT should be boldly printed.

I urge you to extend the public comment time past the May 18th deadline for another 3 months. The commercial nuclear industry should not be allowed to dump its waste into our food supply! This is an outrageous act.

Most Sincerely,

C 2431
