Re: Docket #98.N-1038
Irradiation in Production, Processing, Handling of Food.

This is to support Center for Science in the Public Interest recommendation regarding labeling of irradiated foods.

This is to support small organic farmers; USDA proposal for certification and residue testing is too expensive.

USDA must allow private, non-governmental certification bodies to maintain stricter standards than those of USDA

This is to support recommendations of current National Organic Standards Board.

Sincerely,
Elani Aquino
