5/20/99

Docket #98N-1038
Food & Drug Adm. Dockets Mgmt.
Branch (HFA-305

- Comments: To oppose the FDA elimination of labeling irradiated foods —
- Even at low levels some irradiated foods lose 50% of vitamins, and destroys vitamins
- It is unknown the effects of irradiation on humans - Studies have shown tumors - reproductive failures, kidney damage on animals!
- Despite hazards, irradiation is pushed by meat industry - but do not clean up filthy slaughter houses, and factory farms raising unhealthy animals the consumer must know foods irradiated - our rights being neglected to know the poisoning irradiating of foods we eat: Please no to de-labeling irradiated foods !!!
