Ref. Docket # 98N-1038

Please: may we all think about the future of the younger generations!
Please let us no longer mislead consumers; food has already become far too much industrialised. As you know: it is better for all of us to consume products as much as possible directly from the (clean!) earth; that means: not processed, not transported long ways. Allready that approach demands an other organisation.... but if many products now even will be irradiated, without warning us by the label: where do we go?

The dearest wish we send to all, who are working with food production, - manufacturing, conserving etc. etc.: think about the real health of our Earth and save the good forces, that can be in food-

98N 1038

C 3735

- that can be in food

- without disturbing natural forces and energy by moneymakers systems, which transform products to stomac-fillers!

It is our responsability to be concerned about the future of our younger generations!

Thank you for your attention,

sincerely,

Agatha C. Belda Bartsha
