July 9, 1999

Dear Sir,

I am thoroughly [illegible] the fact that we in the US no longer have a choice of what foods we eat. I cannot and will not support any food market that does not label its food "organic" or "non-irradiated." Labeling is essential for the health of the planet and the chemical changes in food, the radiation exposure to the workers and the public is lethal for all of us. We cannot have a healthy universe if our universe is sick.

Certainly people have a right to eat what they want but I am commited to doing all in my power to raise peoples' consciousness about the dangers of not having foods labeled.

Please help us as a nation to work for a healthier earth. I am specifically interested in citing Docket # 98N-1038.

Thank you.

Margaret R Jarod
