Dear Dr. Henney – I am writing as a teacher, a parent and a concerned rural inhabitant, regarding the future of rGBH and other growth hormones currently in use in dairy farming. Please consider rescinding the FDA's stance on these potentially harmful hormones. Not enough testing has been done on them, and I am convinced that when this testing is done, it will be found that there are far more negatives to them than positives.

Sincerely

Dr. Scott Russell, Twinbridge, VT
