Dear Jane Henney,

I'm writing in regards to the GM foods we are not being told about or the GM foods the FDA cannot guarantee will not, in the long run hurt us by, unknowingly, consuming it.

I feel very strongly that anything that should be naturally grown but has been tampered w/ should be clearly stated and told to the consumer. Why do they have to hide the fact? Why are they not labeling it? - This makes me extremely wary. Something is wrong if they or you won't just put on the labeling how the products are being grown.

I insist on knowing more about the results on our health because of the tampering with the "natural" foods we're consuming. Any modification of the genes should be labeled. Why shouldn't they be?

Please, just at least let us know what foods we buy have been Gene. modified and lets do alot more testing on all these modified foods for the safety of our future.

Thank you, C 5915

Jackie Ross
