Ms. Jane Henney,

5154 '99 SEP 22 P1:39

By using antibiotics to treat livestock & poultry it makes the drugs more uneffective on humans. I am very concerned about the pregnant women who are required to eat meat for adequate iron intake. If you continue to pump antibiotics into these animals people and most importantly children become immune to them. When they become sick their M.D. will perscribe possibly an uneffective perscription. Are you not concerned with the future of the children? Are you uninterested in the health of your people? Please stop using these antibiotics on animals and poultry. Help us by keeping people heathy. I urge you to stop this immediatly so we are able to cure infectious people. Next time you get sick think about it.

sincerelly
