Dear Jane Henney, MD ~ 25 September 1999
Commissioner, FDA

I am taking this time out of my very busy schedule only because this concerns me & very many others, to write this letter to you. And I really hope you will take what I have to say very seriously & take action in the direction that will BENEFIT all ~~m~~ humankind, not destroy it!!!

I really don't have enough time to express to you how much the general public deserves to know what is going on with the food they purchase. I personally spend A LOT of money on organic foods, etc. to ensure that there are no contaminants to effect my kidney disease & my husband's multiple sclerosis. If I can't even buy organic without thinking it could be made up of viruses, bugs, or whatever - this is the most disturbing thought.

PLEASE - AT LEAST LABEL THE FOOD THAT HAS BEEN GENETICALLY ALTERED!!!!!!!!! AND LEAVE THE "ORGANIC" CROPS ALONE!!!!!!!

Thank you for your time.

Sincerely -
Heather & Paul
