Dear Jane:

Writing about the risky proposition of radioactive material in our country to irradiate beef or other products.

If so consumers need to know (upfront) to be able to identify irradiation foods in restaurants & supermarkets —

over

98N-1038

C 4776

We grew up fine + healthy without such extreme's as radiation, (irradiation) of food -

We grew up on farms, with well water, no elec., and our Mother's knew how to have clean fresh or canned products to eat.

I had myggains for 24 years - could not eat over prepaired lunch meats, boloney as in stores without getting ill - Yet in Norway on vacation eat thier boilony without migrain's

Does that tell you something

1. we need our meat packers + ~~to~~ meat growers to handle poltry + Beef + Pigs better - + tested better - for pure foods -

Thank You

Sincerely

E J + G J Shelley
