To Whom it may Concern,

A short note on Genetically Engineered food.

I have many concerns about Genetically Engineered food.

Two of my main concerns are,

1. Lack of long-term studies on food safety.
2. Lack of long-term studies on environmental impact.

Why labeling is important!

With labeling public health official will be able to trace the cause and course of any unforseen public health problem caused by the introduction of genetically altered food (such as the outbreak of Eosinophilia Myalgia syndrome →

92N-0139

C 6294

linked with a genetically engineered brand of amino supplement L-tryptophan in 1989)

Labeling of genetically engineered foods will enable consumers to avoid products produced in manners contradictory to religious spiritual and/or ethical beliefs. Consumers simply have the right to choose for themselves between genetically engineered and nongenetically engineered products. I want to thank you for taking time to read my thoughts.

Respectfully

[illegible]
