November 5, 2002

Dr Karen Midthun,

As your name was mentioned in the N.Y. Times article on smallpox vaccine, I suppose you are receiving a number of letters. I sincerely hope I am not causing an inconvience.

I am opposed to giving the vaccine to small children or anyone else as a test because of possible side effects and because the vaccine offers protection when given up to four days after exposure.

I appreciate your reading this and passing it along.

OZN-0466 C46

Sincerely yours,

Jane Mahon
