Dear Ms. Henney,

I am writing because I am very concerned about genetically sterilized plants and seeds. Seed sterility will not ensure quality or productivity. Currently, there are a number of different genetically engineered foods on the market without labeling or testing. Thus many consumers are using genetically engineered products daily without knowing it. People with ethical or religious dietary principles and those with food allergies have no way of knowing what they are ingesting. Therefore, I would appreciate the FDA's efforts to protect the safety of our food and would like to know what steps are being taken.
