Dear Commissioner Henney M.D.

Please put the draft concerning "subtherapeutic". I understand that of fifty million lbs. of antibiotics produced every year in the U.S, 40% is administered to animals - & a shocking 80% is used solely to promote growth. The result: Disease-causing bacteria such as salmonella are becoming resistant to antibiotics. This has been linked to antibiotic resistance in humans. So in the long run we're not doing the animals any favors & hurting ourselves.

Sincerely,

Jennifer L Martin
