Dear Sir/Madam:

A recent analysis of New York dairy farms conducted by Cornell University agricultural economists found that although Bovine Growth Hormone increased the amount of milk produced by dairy cows, the hormone was not profitable because of increased costs of production.

I have to believe that the continued use of BGH is due to intense lobbying by special interests — who also want to promote its use by confusing or non-existing labelling.

Please act on Docket #99P-4613 to ban the use of genetically engineered Bovine Growth Hormone on dairy cows.

Thank you!

Teresa J. Allen
