FDA Commissioner, Dockets Management Branch (HFA-305)
re: Docket # 00N-1396 & Docket # 00D1598

Dear Sir:

I'm writing to express my anger and frustration at FDA proposed rules on Genetically Engineered foods. I am a manufacturer of Natural cheeses, and am committed to protecting the image of American foods as safe and wholesome. FDA seems to be abandoning that image for the sake of an improved bottom line for those companies willing to experiment on an unsuspecting public.

① the rules must require mandatory pre-market testing, independent from industry.

② they must require pre-marketing environmental review.

③ they must require mandatory labelling of genetically modified foods.

Please stop compromising Americas food supply by giving in to every short-sighted whim of our industry's biggest players.
