10.28.99

Deer FDA,

This letter is regarding docket no. 97N-0074 on ways to reduce foodborne illness in our nation. We suggest you prohibit forced molting in hens. Due to the severe stress the birds endure (some die during this time), the immune system is weakened, and disease (salmonella) spreads quickly and easily. Ending this practice would solve part of the foodborne illness problem.

Sincerely,
Amit & Chris Hansmeyer
