STRUCTURE/FUNCTION CLAIMS

FDA
office of dietary supplement programs/
nutritional products division
5100 Paint Branch Pkwy
College Park, MD 20740

December 17, 2003

To Whom It May Concern:

On behalf of Dynamic Nutritional Products®, I would like to present structure/function claims for 3 dietary supplement products that were released on December 1, 2003. These new products include L-Carnitine (as L-carnitine tartrate), CoQ10 and Alpha Lipoic Acid SR. All labels contain the proper disclaimer, "This statement has not been evaluated by...etc."

L-Carnitine (as L-carnitine tartrate):

500 mg (30 vegetarian capsules)-ID # LCR6308; (60 vegetarian capsules)-ID # LCR6605

Claim: L-Carnitine Tartrate is a stable form of the amino acid derivative L-Carnitine. Used as a dietary supplement, each one vegetarian capsule serving of Dynamic Nutritional Products® L-Carnitine provides nutritional support for energy and is an essential cofactor in lipid metabolism.

CoQ10:

30 mg (30 softgels)-ID # COQ1334; (60 softgels)-ID # COQ1365

100 mg (30 softgels)-ID # COQ1631; (60 softgels)-ID # COQ1662

Claim: Used as a dietary supplement, each 1 softgel serving of Dynamic Nutritional Products® CoQ10 provides antioxidant support for general health and well-being. In addition, CoQ10 is an important cofactor in energy metabolism. Dynamic Nutritional Products® CoQ10 is a pure, pharmaceutical grade coenzyme Q10 that is hermetically sealed in a opaque softgel to protect the CoQ10 from light and oxidation. This insures maximum activity, stability and bioavailability.

Alpha Lipoic Acid SR:

300 mg (60 sustained release caplets)-ID # ALA4663; (120 sustained release caplets)-ID # ALA4694

Claim: Used as a dietary supplement, each 1 capsule serving of Dynamic Nutritional Products® Alpha Lipoic Acid is in a sustained release caplet that provides extended antioxidant support for general health and well-being. In addition, Alpha Lipoic Acid is a cofactor in energy metabolism.

Regards,

Mike Smith
