RECEIVED FROM THE
OFFICE OF SPECIAL
NUTRITIONAL SERVICES - 450

We are using nutritional support statements on our labels for these products:

Calcium Softgel (code 557) containing calcium, magnesium, zinc, copper and vitamin D. The NSS states:
For Strong Bones and Healthy Teeth--on the front panel and these two statements on the side panel:

Calcium, magnesium, copper, zinc and vitamin D are required for healthy bones and as co-factors for many cellular processes, including blood clotting, energy production, vision, and the use of iron in blood formation.

Regular exercise and a healthy diet or dietary supplements providing enough calcium helps women maintain good bone health and may reduce their high risk of osteoporosis later in life.

Cranberry Concentrate (code 916):

Cranberry fruit helps to protect the bladder by inhibiting the adherence of bacteria to the bladder wall.

Lutein (code 741):

Helps to protect the retina against oxidative damage.

Echinacea (code 915):

One of the primary functions of Echinacea purpurea root is to stimulate the production of white blood cells. Echinacea also stimulates wound healing by increasing fibroblasts (blood-clotting cells). In Europe, Echinacea preparations are used to maintain good health during cold and flu seasons.

Sincerely,

Diane Harper
